A System as Flexible as You Are Creative!

TRUE PLC BASED SCADA

At ICI, we believe that you should be able to purchase a SCADA system and service it yourself, or at least select a service professional of your choice. To make this come true, we have designed a basic SCADA system that is built with solid time tested components. The heart of this equipment is the Allen-Bradley Micro PLC. (Other PLC processors are available). This offers major benefits for you, some of which are:

- Dependable quality construction
- Availability of nationwide service and support for years to come
- Long term availability of replacement and upgrade components
- Simplicity of construction
- Flexibility in functionality
- Cost savings

The ALC Data-Link™ gives you the options to go beyond simple monitoring of basic inputs to controlling outputs based on the input state or remote control, levels, internal logic and much more.

Every package, basic or custom, comes as a UL 508 or 698 listed assembly.
